

FOR IMMEDIATE RELEASE — May 05, 2024 / Berlin, Germany

### **Voxativ sets the new tempo in field coil loudspeakers with Andagio at HIGH-END Munich 2024.**

This week in Munich, Voxativ, the renowned Berlin-based manufacturer of full-range loudspeakers and bespoke electronics, proudly debuts **Andagio**, their newest horn-loaded model meticulously optimized for their exclusive range of field coil drivers.

Andagio is a visionary reimagining of the core elements that earned Voxativ's Ampeggio Due model the top position in AUDIO magazine amidst fierce competition for years. The iconic Due's exotic side-loaded horn, renowned for its capacity to reach down to 25 Hz, has been cleverly reconfigured to the rear of Andagio, creating a design that is not only deeper in form but also more adaptable to rooms with limited width.

Like all Voxativ products, Andagio integrates precision engineering with soulful craftsmanship and a relentless disregard for the ordinary. Starting at \$32,900 when equipped with the paper-coned AC-X field coil driver, this model also offers higher-resolution configurations like the wood-coned AC-X2 at \$36,900.

For the discerning audiophile who demands the ultimate in finesse and dynamics, the "Andagio" can be equipped with the world's first and only "hybrid field coil driver," the AC-XHB, priced at \$69,900. This innovative driver is unparalleled, combining a neodymium magnet ring to induce passive magnetism with a field coil and power supply that render it electromagnetic. The AC-XHB features a wooden cone crafted from tonholz, a revered material traditionally used in violin making, and is complemented by a supple goat leather surround.

Remarkably, the AC-XHB achieves a magnetic force of 24K Gauss within a 10mm gap—the most potent magnet motor ever developed. This formidable engineering enhances sonic performance through precise magnetic field control and ensures exceptional linearity and minimal distortion. The result is a sound of unparalleled clarity and detailed expression, bringing every nuance of the music to life.

Every configuration comes with the N1 linear power supply as standard, designed to provide a pristine 12V DC voltage. Voxativ also offers three other improved power supplies that offer greater control and sophistication: a battery-powered version, a super-cap version, and, at the highest level, a tube-based configuration.

In celebration of the world's largest international high-end audio show, Voxativ will present "Andagio," equipped with the AC-XHB and powered by the upgraded **Voxativ N2 battery power supply** (\$12,900). This model boasts an automotive-grade cell that maintains a stabilized 12V charge for up to 8 hours and recharges automatically while in use.

The entire system will be driven by the **Voxativ T805 SET Integrated Amp** (\$34,900), featuring 805 tubes in a pure Class-A design with a KT66 driver stage and an ECC83 input stage. The T805's substantial 120-lb (55-kg) unibody housing is anodized in Berlin black and carved from a single 150-lb (68kg) aluminum block.

Voxativ founder and chief engineer Inés Adler Dipl.-Ing will be present with her team from Berlin and the USA to introduce these groundbreaking products alongside timeless models like their modular 9.88 System and the reborn Ampeggio, a Stereophile product of the year.

Just as their home city, Berlin, Voxativ stands at the crossroads of glamour and grit, offering provocative, award-winning designs and handcrafted electronics that reveal the emotional truth of the music.

VOXATIV ANDAGIO

ANDAGIO **VOXATIV**  
PURE LISTENING

Frequency Response 25-20,000 Hz  
 Driver Options AC-X, AC-X2, AC-XHB  
 (110 dB eff.)  
 Capacity 50W Sinus  
 Dimensions 27" x 71" x 27" (WxHxD)  
 Piano Finish Berlin Black  
 Weight 165 lbs

POSTKARTE  
GRÜßE AUS BERLIN!

**ANDAGIO IS THE NEW TEMPO**

She is the sonic offspring of our award-winning Ampeggio Due, challenging the status quo with raw power. Ditch the filtered sounds of crossover designs for something real and uncut. This beast runs full-throttle on a **filter-free design**, boasting a massive **folded back-loaded horn** that packs a symphonic punch. Customize your pair with a choice from our **trio of field-coil drivers** and a fierce arsenal of power supplies. Driven by electromagnetic force, our field-coil tech adeptly navigates complex crescendos, ensuring a purity of sound that mirrors the vibrancy of a live performance. **STAY CURIOUS.**
